Stakeholder

(Describe person using empathic language)

NEEDS A WAY TO

(needs are VERBS)

Interviewing Tips

•Ask why.

•Encourage stories.

•Look for inconsistencies.

•Pay attention to nonverbal cues.

•Don't be afraid of silence.

•Don't suggest answers

•No leading questions.

## Worksheet #2

### ENVISIONING: rapid ideating as many possible solutions

#### Brainstorming Tips

- Yes, AND...** Build on ideas!
- Why not?** Don't feel constrained by what you think is possible or impossible. Defer judgment and put all ideas out there.
- Capture** all ideas, in a way that they are visible to all participants.
- Go for **quantity** of ideas.
- One person speaks at a time (listen, so that you can build on others' ideas).
- Be **concise**.
- Be **visual**. Use sketches and mind maps.

(\*) If brainstorming in a group, use a big vertical space (chart paper or whiteboard)

## Worksheet #3

## ENACTING: prototyping & building to learn

### 1. Selected IDEA

(Describe succinctly)

**2. Make this idea tangible so that the stakeholder(s) can interact with it and experience it. Dive in and BUILD to think!**

(see some tips below)

### 3. Capture Feedback

**+** what worked...

**-** what could be improved...

questions?

ideas!

### Guidelines for Prototyping

#### Building/Creating Prototypes:

- Instead of describing it, make your idea **tangible**
- Instead of planning, dive in and **build** to think
- Stay in **brainstorming mode** (defer judgment, build on ideas)
- Keep **resolution** at the minimum necessary to convey and test your idea
- Do not stress too much about having selected the RIGHT idea

#### Testing Prototypes:

- This is when you put your **critical hat** on. Do NOT strive to validate your idea, but to stress test it and learn from it
- Capture **feedback**. Don't let failure go unexplored. It is a missed opportunity for learning
- Be open to **unexpected outcomes** and misunderstandings, as they are great sources of insight
- **Do NOT get too attached** to your prototype/idea. If it doesn't work, learn from it and move on (go back and harvest your idea board, or revisit the problem space)

### What next?

Keep prototyping and testing.  
Design thinking is an iterative process,  
built on a foundation of empathy.
